RECEIVED
9-26-13

To Whom It May Concern:

I am strongly in favor of revising regulations related to net metering for residential as well as other applications. Currently I am in the process of installing solar energy system that is expected to meet or exceed my home's needs part of the year but not all of the them other parts of the year. I respectfully request that :

- Raise 0.2% cap on total allowable net metered capacity to ~2%
- Eliminate resetting of customer's net metering credit balances

The local church in Clemson that I am a member of is also interested in installing solar panels and I respectfully request that:

- Raise the 100 kW net metering cap on non-residential systems to ~2MW
- Allow for net metering of community solar systems

Although lacking oil, gas and coal, South Carolina is blessed with abundant sunshine which should be harvested to provide jobs, income and prosperity for it's citizens.

Sincerely

Michael Kohl
